The Southern California Regional Energy Network (SoCalREN) Public Agency Programs believe public agencies can lead their communities to a safe, secure, resilient, affordable, and sustainable future.

Roadblocks may include:
- Incentive ineligibility
- Retrofit complexity
- Below-code measures
- Agency capacity and resources
- Technical expertise

Many public agencies that serve disadvantaged communities must bridge larger gaps to become energy leaders and support the communities most vulnerable to climate impacts. SoCalREN’s Pathway to Zero was designed to help disadvantaged communities jump ahead and maximize energy efficiency opportunities while planning for integration of Distributed Energy Resources (DERs).

The Metered Savings Program offers a new way to access SoCalREN’s technical support and project management services. The program takes a holistic approach to identify deep retrofit opportunities by measuring and modeling energy savings at the meter. This project approach can circumvent roadblocks and unlock opportunities going beyond utility incentive eligible measures.

The Path to Zero Net Energy begins with energy efficiency. The SoCalREN Project Delivery Program guides public agencies from start to finish through a variety of energy efficiency projects, saving enrolled agencies money and energy.

The Southern California Regional Energy Network (SoCalREN) Public Agency Programs are administered by the County of Los Angeles and funded by the California utility ratepayers under the auspices of the California Public Utilities Commission.

The Energy Coalition is the current implementer of SoCalREN Public Agency Programs. Learn more about us at energycoalition.org.
